ID-08ES ROUND BORE LINER

Dairymen have been asking for liners with a better shut off and the ID-08ES is the answer!

Conewango ID-08ES Round Bore Liner

Similar to our ID-08E and ID-08ER, this liner has several new features, making it attractive for many different applications. The ID-08ES is designed to fit 06 style shells.

The inside diameter of the milk tube has been increased to fit today's larger inlet claws.

Now available from Conewango Products, our new stainless steel 06 style shells. This makes a perfect companion for the ID-08ES Round Bore Liner!

- The rubber formulation is a longer life version of our standard proprietary formulation, like our ID-08ER, with a recommended service life of 1500-1600 cow milkings.
- The bumper ring area of the milk tube is a completely new design allowing for maximum vacuum shut-off during unit attachment.
- A flex point has been added to the upper portion of the milk tube to allow better unit alignment.
- The overall diameter of the head has been reduced to give a better fit in the WestfaliaSurge wash manifolds.
- The inside diameter of the milk tube has been increased to fit today's larger inlet claws.

 This liner can be vented upon request. 

The ID-08ES Round Bore Liner carries the standard Conewango money back guarantee. You decide; if this product doesn't out perform your current brand we will gladly refund your money.
